INTRODUCTION

With the advent of cryptocurrency in the second decade of the 21st century, it has become a crystal straightforward matter that it will hover modern time's financial horizons. Hundreds of cryptocurrencies have been introduced in the markets of Finance. Still, every currency could not get a valuation, and the reason for failure was simple, and that was the reason for exploitation on behalf of the planners. Moslim coin has been introduced with the concept of intrinsic, real, and individual investors benefits. It has also included the excellent concept of Islamic Finance. It has abolished the concept of money-making and has been designed for the best interest of its investors. Its social commitments, ledger accountability, blockchain, and its development are so significantly planned that it indeed has optimum possibilities that this cryptocurrency's future and opportunities will be skyhigh. OUR MISSION:

Using decentralized finance for the benefit of Muslims around the world, regardless of country of residence. The ethics of Islamic finance pays great attention to social justice, frugality, and work related to hard work.

Our Aim:

The goal of creating a token is to direct savings into long-term production investments and replace other financing. In the Islamic financial market, all transactions must take place in forms that do not contradict Muslim consciousness and Islam. Under these laws, money performs only one property - the means of exchange, so the collection of interest is prohibited and considered illegal, as well as enrichment arising from an accidental combination of circumstances, for example, winning a lottery or during a card lot. Contracts that imply uncertainty with respect to conditions, such as the subject matter of the contract, price or time of delivery, are excluded from business practice. This way of doing business is the most reliable and less risky. We offer the opening of Muslim financial companies providing a wide range of services, along with traditional but compliant sharia. It follows from our model that the well-being of Muslim citizens, as well as of the population whose principles do not contradict sharia standards, can increase significantly through the functioning of such companies, which provide free access to Islamic products. Other consumers will also be able to profit from the use of alternative financial instruments, the analogues of which are not available in the traditional system. Thus, diversity and the need to use new financial instruments will lead, on the one hand, to an increase in the level of savings, thanks to the part of the population that is inclined to save, and on the other hand, to an increase in which is prone to entrepreneurship.

Why moslim coin, rather than muslim or moslem?

In many European languages (German, Portuguese, Dutch), this wording is used, so we emphasize the growing European size of Muslim society and its connection with the rest of the world.

PROBLEM-SOLVING MODEL

Since the early 2000s, micro-financial institutions have grown rapidly in the world. It is no secret that many micro-financial organizations lend money at a huge usury interest, which can reach 1000% + per year.

At the same time, there are opportunities associated with DeFi when significant amounts of liquidity can be used for the benefit of ordinary people.

Our project is aimed at connecting the world of Islamic finance and the possibilities of decentralized financing.

OUR PRINCIPLES

- Reduction of financing cost based on Defi. When contacting microfinance organizations, you will be shown that the interest rate is 1% per day. However, if you calculate more carefully, this is equivalent to 500 +% per annum. The main mission of our project is to significantly, even by 2 orders of magnitude, reduce the cost of financing based on the principles of Murabaha Sukuk.
- Using the Tron ecosystem. The creation of a currency that complies with the principles of Islamic finance cannot be based on Bitcoin, Ethereum, since these tokens are used in the trade in drugs and weapons, speculative operations are carried out through them.
- Mslc token is a bridge between the Defi market and the world of Islamic finance: we use Murabaha Sukuk.
- The profitability of Mslc is formed on profit, which based on tokens invested into liquidity pools so this corresponds to the basic principles of Islamic finance.
